

USHFC-2016-Resolution Re: Toxic Exposure, Parental and Citizen Rights
Resolution 1

Call for the Protection of Life on Earth Regarding Toxic Exposure, Parental and Citizen Rights

2016 United States Health Freedom Congress

St. Olaf College, Northfield Minnesota

July 31st - August 2nd, 2016

Submitted by Moms Across America

Whereas, Our country's founding fathers created our great nation based on the principle of freedom and the religious right to choose to practice as one wishes,

Whereas, Our country's founding families, whose women managed the care of their families, planted and cultivated their own gardens, and had the right to make religious and personal health care choices,

Whereas, Our nation has become one of power, wealth, and strength, all of which came about because of ancestors who were free to follow their own path for health care, religion, and professional endeavors,

Whereas, Without knowledge, the citizens of the United States are left without protection from neurotoxicity, endocrine disruption, carcinogens, and immune system disruption; the loss of these rights will limit the health and prosperity of our country in the future,

We submit the following Principles for the Protection of Life on Earth:

1. All residents of the United States of America shall have the choice to decide if and when their own body, their child or living being in their care, for religious reasons or health choice reasons, is exposed to toxic chemicals by any method of exposure. This shall include drift by air, ingestion by water or food, contaminated soil, and injection or administration by medical treatments.
2. All residents of the United States of America shall have the choice to decide what exposure to toxic chemicals their family is exposed to, without regard for religious or moral reasons.
3. All residents of the United States of America shall be protected by our city, state and federal government against chemical trespass with laws which prevent exposure to toxic chemicals. Polluters shall be prosecuted to the fullest extent of the law. Citizens will have the right to refuse, via any method of delivery, exposure to toxic chemicals.

4. All residents of the United States shall have the ability to report toxic exposure, pollution or contamination to the EPA, FDA and CDC. Residents shall receive a timely response within 72 hours and receive services, funded by taxpayers, to resolve said toxic exposure within 30 days.
5. "Toxic chemicals" shall be defined as any substance that may cause harm or death if inhaled, ingested or absorbed through the skin. Harm is defined as impacting any bodily functions needed to maintain health. This definition will include all living beings as well as harm to the environment.
6. All chemicals in their singular and total final formulation, shall be required to be tested for said toxicity with independent, long term (2 year) studies, as scientifically recognized by the World Health Organization as sufficient for efficacy. The approval or rejection process shall be carried out within 2 years, by EPA or CDC individuals in an objective manner, by people who are not influenced or coerced by the profiting chemical company lobbyists or politicians in any manner.
7. Until these testing and approval processes are enacted, citizens shall have the right to invoke the "Precautionary Principle" and therefore have the right to refuse any forms of treatment, including medical treatments, medications, and vaccinations. Citizens will have a choice of said treatments from federally funded or privately owned facilities. This includes choices of water, air, food and all medical treatments.

THEREFORE, BE IT RESOLVED that the following Voting Members of the US Health Freedom Congress do affirm and support the above findings and principles for the protection of life on earth submitted by Moms Across America, addressing parent and citizen exposure to toxins and the rights of parents and citizens to live in and choose environments, products, occupations, air, food, and treatments free of toxic chemicals and other toxins.
